Type Package

Title Procrustes Matching for Latent Space Item Response Model

Version 0.1.0

Description Procrustes matching of the posterior samples of person and item latent positions from latent space item response models. The methods implemented in this package are based on work by Borg, I., Groenen, P. (1997, ISBN:978-0-387-94845-4), Jeon, M., Jin, I. H., Schweinberger, M., Baugh, S. (2021) <[doi:10.1007/s11336-021-09762-5](https://doi.org/10.1007/s11336-021-09762-5)>, and Andrew, D. M., Kevin M. Q., Jong Hee Park. (2011) <[doi:10.18637/jss.v042.i09](https://doi.org/10.18637/jss.v042.i09)>.

procrustes 2

Index 4

procrustes*procrustes*

Description

Procrustes matching of posterior samples of latent positions of persons (z) and items (w) from LSIRM with q-dimensional interaction map

Usage

```
procrustes(z, w, ref = 1)
```

Arguments

- z** A list of length M. M posterior samples of person latent positions N x q, where N is the number of respondents and q is the dimension of the interaction map.
- w** A list of length M. M posterior samples of item latent positions I x q, where I is the number of items and q is the dimension of the interaction map.
- ref** Reference configuration (i.e., iteration) index. Default is 1 (i.e., posterior samples at iteration 1).

Details

The function performs Procrustes matching by aligning the M-1 posterior samples of z and w to the reference configuration (e.g., iteration 1). Users can select any configuration as the reference with the `ref` argument. The function returns M matched lists of z and w after the Procrustes matching process.

Value

A list of M matched posterior samples of z and a list of M matched posterior samples of w.

Examples

```
# Load package
library(prolsirm)

# Generate example posterior samples
# M=3 samples of person latent positions (N=50, q=2)
z <- list(matrix(rnorm(100), ncol = 2),
           matrix(rnorm(100), ncol = 2),
           matrix(rnorm(100), ncol = 2))

# M=3 samples of item latent positions (I=5, q=2)
w <- list(matrix(rnorm(10), ncol = 2),
           matrix(rnorm(10), ncol = 2),
           matrix(rnorm(10), ncol = 2))

# Perform Procrustes matching
matched_data <- procrustes(z = z, w = w)
```
